ph. 1-204-953-4210

0.650" Reach Door Weatherstrip - 170' Rolls Black & White Available

- Constructed of closed cell EPDM sponge as well as dense EPDM combined with a rigid Polypropylene support for easy kerf insertion.
- The EPDM sponge material is closed cell and will not absorb or wick water.
- Excellent weather, ozone, and UV resistance.
- Stable in high and low temperatures and offers excellent compression set properties.
- The low friction surface offers minimal coefficient of friction and provides protection against abrasion.
- The seal can be used on all pertinent sides of the door and is manufactured in a continuous fashion: header, hinge, and strike

high performance sealing solution

for entry door systems. Known for its natural UV resistance, superior compression set, and excellent weathering resistance, the door seal is co-extruded using closed cell EPDM sponge and dense material with a rigid base for easy insertion. A low-friction coating is applied to the material offering abrasion resistance and low coefficient of friction.
